

Theoretical basics

Technical report

General template for technical reports. It can be copied in edit mode and copied to a new page.

Vorlage IPA documentation

These documents serve as a template for the documentation of the 10-day IPA. When using these templates, many formal requirements from the pkorg criteria list are already fulfilled.

Example of a daily journal

The daily journals should be started every morning with the planning and completed in the evening before going home with a results report and a reflection.

Hermes acceptance protocol

Hermes is a project management system developed by the Swiss Federal Administration. It serves as a guideline for the implementation of projects and is intended to ensure a standardised procedure in all federal offices. The Word template for the Hermes protocol can be found in the template for the IPA documentation.

Test concept and test implementation

The test concept deals with the following questions: How is a test concept put together? What requirements must be met so that test results can be reproduced? Test execution is about the results and findings from the tests.

Carrying out evaluations

Evaluations can be carried out in several steps and using different methods. This module summarises various options for carrying out evaluations.

Useful commands

An unsystematic compilation of useful Windows and Linux commands and routines.

Service Level Agreement
